

NNOA.ai

Hong Kong's first agentic interior soft furnishing commerce with shoppable renders

“Every design you see is a space you can buy.”

Hi, I'm COZI.
Your Ai design assistant.

The Render Is Not Yet Buyable.

AI can imagine beautiful rooms, but today's output rarely connects to real products, pricing, merchants, logistics, and installation.

1 Consumer Pain

- AI furniture is often fictional
- Design → order → delivery → install is fragmented
- Users know the style they want, but not how to mix and match.

2 Merchant Pain

NNOA.ai turns rendered intent into shoppable, SKU-bound room commerce.

Two Journeys. One Platform.

Supply-side SKUs meet room-level demand.

NNOA.ai connects supplier-side product data with user-side room intent through one AI commerce bridge.

Manufacturer / Brand Journey

1 Upload SKU Catalogue
Bulk upload or integrate your product catalogue.

SKU Catalogue		
SKU	Product	Category
600-K311	Winston Bag	Rugs
CEO-S119	Lustr-Ganszn	Curtains
C08-6H4G	Tinixu Coulsten	Cushions
LAMP-AGG	Table Lame	Lighting

2 Add 3D Assets + Pricing
Upload 3D models, images and set pricing.

3 Set Stock + Supplier Rules
Define inventory, lead rules and fulfillment settings.

Inventory & Roles	
Stock	150 >
Load Region	Hong Kong >
Max. Order Value	HK\$1,000 >
Load Assignment	Auto >

4 Receive Qualified Leads
Get high-intent leads with room context and product list.

End-to-End. Every Feature. One Platform.

NNOA.ai combines room capture, spatial AI, shoppable commerce, and fulfillment operations into one continuous soft-furnishing platform.

1 Capture & Understand

- Room scan
- Product scan
- AI semantic understanding
- Style intent

2 Spatial Intelligence

- Bounding box detection
- 3D smart layout
- Collision detection
- Floor-plan output

3 Commerce Engine CORE MOAT

- SKU match engine
- Shoppable render canvas
- Instant swap
- Auto BOM

4 Fulfillment & Service

- AI concierge
- Smart order orchestrator
- Logistics
- HK assembly network

AI Concierge
Always here to help.

Reliable Logistics
On-time. Every time.

HK Assembly Network
Quality you can trust.

Capture
See it.

Match
Make sense.

Render
See it styled.

Order
Buy with confidence.

Install
Live beautifully.

Spatial Intelligence Is the Moat.

BIM-like spatial understanding turns real SKUs into walkable, scale-valid room layouts.

Bounding boxes

Live SKU scale

Walkable layouts

01 Room Bounding Box Detection

Detects wall envelope and placement zones.

02 Spatial Matching Engine

Ranks SKU sets by room size and style intent.

03 Furniture-to-Space Fitting

Validates proportion, orientation, and usable distance.

04 Collision Avoidance & Clearance

Prevents overlap and preserves walkable circulation.

Bounding Boxes Become Buyable Rooms.

NNOA.ai transforms a **live SKU database** and **room constraints** into ranked, purchasable room layouts.

SKU DATABASE

MATCHED: 4/4 | SCAN TIME: 0.8s | 10,847 SKUs PROCESSED

Add Room to Cart

Core Intelligence Stack.

NNOA.ai's moat is the intelligence layer that connects room understanding, live product data, shoppable interfaces, and future learning.

From infrastructure to data to intelligence, every layer compounds into room-level commerce.

One Order In. Auto-Split. Fully Tracked.

One customer order becomes supplier-level execution.

From Dream to Done.

NNOA.ai's AI Project Concierge stays with you after design generation, coordinating the journey from inspiration to installed room.

Revenue Model & Pricing

NNOA.ai is **asset-light, ecosystem-heavy**, and designed to avoid direct inventory risk or bad debt while **monetising merchant demand, AI tools, data intelligence**, and **premium consumer features**.

Merchant-Prepaid Model (No Inventory Risk)

1. Merchant Listing & Lead Gen

HK\$2k-15k / month

- ✓ Paid visibility
- ✓ Qualified design-intent leads
- ✓ SKU placement in shoppable renders

2. Design AI Cloud (GaaS / API)

HK\$399 / month to custom

- ✓ Merchant design tools
- ✓ Portal access
- ✓ White-label or API usage

3. Trend Intelligence

HK\$10k+ / report

- ✓ Anonymised style demand
- ✓ Product trend signals
- ✓ Room-level category insights

4. B2C Freemium

HK\$0 to HK\$99 / month

- ✓ Free room creation
- ✓ Premium styles
- ✓ Saved projects
- ✓ Concierge upgrades

Asset-light

Ecosystem-heavy

Zero inventory risk

Zero bad debt

From searching products to deciding spaces.

-  Faster decisions
-  Higher conversion
-  Better demand intelligence

10-year endpoint: every home brand, developer, and renovation company plugs into our taste data to decide what to design, build, stock, and sell.

What Spotify did for music taste, NNOA.ai will do for living taste.

We start with furniture commissions. We end as the **data infrastructure for living consumption.**

Premium AI Commerce at Accessible Price

NNOA.ai occupies the whitespace between affordable mass-market furnishing and high-friction interior design firms by combining **AI-integrated room design** with **direct shoppable supply**.

The opportunity is not another catalogue; it is a **purchasable room operating system**.

Competitors Solve One Layer.

NNOA.ai Closes the Loop.

Most platforms solve only one part of the journey;
NNOA.ai integrates **AI design, live SKU catalogue, shoppable output,**
and a **data feedback loop** into one full-stack room-commerce system.

	 AI Design	 Live SKU	 Shoppable Output	 Data Loop
 houzz				
 wayfair				
 Alibaba / Taobao				
 IKEA Place				
 Midjourney				
interior ai Interior AI				
 MODSY Modsy				
nnoa.ai				4 / 4 full-stack loop

 Strong capability  Partial capability  Not available

The moat is not rendering alone — it is the **closed data-and-commerce loop** around real rooms and real products.

PROJECT SCHEDULE II

Technology Development

R&D and prototyping timeline updated from the latest planning reference, showing how the platform moves from current web prototype into production-ready merchant and consumer systems.

Category	Q1 (Month 1–3)	Q2 (Month 4–6)	Q3 (Month 7–9)	Q4 (Month 10–12)
R&D Plan	- Finalize AI spatial matching engine and agentic selection. - Build shoppable canvas. - Optimize rendering pipeline for SKU visual fidelity. - Develop spatial layout AI.	- Integrate 3D Gaussian Splatting (3DGS) with room scanning for enhanced spatial accuracy. - Deploy layout generation model for precise furniture placement. - Build VR with panorama.	- Develop merchant SKU upload portal with automated AI tagging. - Optimize end-to-end pipeline speed and style. - Implement A/B testing framework for rendering quality. - Build Smart Order + AI project assistant.	- Launch consumer mobile app using React Native with photo scan and LiDAR support. - Integrate one-click checkout with multi-supplier order splitting. - Achieve production-ready system stability.
Prototyping	Current status: working web prototype with full pipeline from room scan → AI style matching → SKU selection → shoppable render. 3,000+ SKUs in database, 991 tests passing.	- Merchant dashboard MVP with SKU management, analytics, and lead tracking. - Internal beta testing with 10 pilot merchants.	- Consumer-facing beta app with room scanning, style selection, and purchase flow. - Closed beta with 100 Hong Kong users.	- Production-ready platform for both merchants (GaaS dashboard) and consumers (mobile app). Workable prototype fully launched by Q4.

EXECUTION ROADMAP

12 Months to Market Leadership

A quarter-by-quarter launch plan moving from merchant validation and product proof into Hong Kong closed beta, public beta, and cross-border scale.

Q1 · JAN–MAR	Q2 · APR–JUN	Q3 · JUL–SEP	Q4 · OCT–DEC
Foundation	Validation	Ignition	Scale
MARKET VALIDATION • Merchant interviews with early supplier targets. • Targeted outreach to top GBA suppliers. • Trade “free digitization” for high-quality product dimensions and 3D models. MARKETING PLAN • Produce demo video / web app. • Prepare professional merchant-facing sales deck. • HK company incorporation and brand website cold launch.	MARKET VALIDATION • Sign 10 pilot merchants through Letter of Intent. • Invite 50+ interior designers for early beta access. • Validate “designers render with real SKUs and earn commission” loop. MARKETING PLAN • Exhibit for bulk merchant leads. • Test merchant prepaid model launch. • Build designer community word-of-mouth and waitlist; launch official community channels.	MARKET VALIDATION • HK market closed beta launch, targeting 200 real users. • Validate pure C-end click-through and purchase conversion rates. • Integrate SF Express / Cainiao; test Smart Order Orchestrator. Includes local assembly network testing. MARKETING PLAN • Run precision digital ads targeting new homeowners and renters. • Encourage beta users to share “dream rooms” on social media as UGC. • Collect NPS scores and optimize merchant onboarding flow.	MARKET VALIDATION • App public beta for iOS and Android. • Cross-border logistics and payment gateway fully integrated. • Achieve 1,000+ active buyers milestone. MARKETING PLAN • Launch omni-channel growth campaign and referral program. • Publish merchant success case studies, e.g. 300% conversion lift.

A Three-Sided Platform Network.

NNOA.ai becomes the connective infrastructure between **production-side supply**, **destination-side demand**, and **ecosystem enablers** — with **100% real SKUs** and **0 platform commission**.

Merchant-prepaid model: suppliers capture direct leads; NNOA.ai monetises access, SaaS, intelligence, and services.

More supply

better room matches

more user demand

richer data

stronger merchant value

The Team Behind NNOA.ai.

NNOA.ai is led by **architectural-computational** founders who understand **spatial design**, **AI workflows**, and **cross-border home-commerce** execution.
